

Frequently Asked Questions

Kingston System-Specific TAA-Compliant Server SKUs

Kingston has released a line of server SKUs designed to help us better serve the federal government. This line of SKUs consists of our top-selling server SKUs that comply with the guidelines of TAA compliance.

Q. How do I identify the TAA-compliant SKUs?

A. The TAA-compliant SKUs have a **-G** after the Kingston part number.

Q. How can I access a list of these SKUs?

A. The current list can be found here: kingston.com/channelmarketingcenter/oemspecific/literature/MKF_1483_GOV_CrossReference.pdf as well as at kingston.com/gov

Q. Are these SKUs covered under KingstonCare?

A. Yes. These SKUs have the same coverage as our system-specific server SKUs. They are subjected to the same testing processes, have the same lifetime warranty and are covered under KingstonCare and our IBM Service Agreement.

Q. Does this mean that these products are made or assembled in the U.S.?

A. No. These SKUs are being sourced from countries that are included on the government list of TAA-compliant countries.

Q. Does Kingston have a GSA schedule or have signed letters of supply with our government resellers?

A. Kingston has not authorized our products to be on any GSA schedule. Kingston has not currently issued any letters of supply with any resellers.

There are many federal government contract vehicles outside of GSA that require TAA compliance. Kingston wants to support resellers in capturing the enormous opportunities outside of GSA as a first step.

Q. What do I do if my customer wants a server SKU not on the list?

A. Please work with your Kingston representative to determine SKU eligibility for TAA compliance.
