

At NEC Display Solutions, high-performance monitors are just the beginning...

When you think of NEC Display Solutions (formerly NEC-Mitsubishi), high-quality, dynamically designed monitors packed with advanced technologies usually come to mind first. However, NEC's industry-leading service and support, highlighted by its Custom Care™ suite of lifecycle services, also offer your customers many benefits that further contribute to a smart investment and a low total cost of ownership.

Custom Care™ Lifecycle Services

When your customers purchase monitors from NEC Display Solutions, they're getting more than just high-quality screen performance and advanced technologies...they're starting a lifecycle of display ownership that includes the highest level and service and support in the industry. The Custom Care suite of lifecycle services ensures that your customers' display purchase remains a smart investment from the day they place your order to the day they dispose of the product.

Throughout the lives of their displays, your customers can take advantage of the many warranty enhancements offered by our **Service+™ program**. During the time of their display ownership, they have the opportunity to extend the lives of their displays with our **Premium Protect™ extended service plans**. While your customers and their employees are realizing the benefits of NEC displays at work, we offer the opportunity to enjoy these same displays at home with our **NM-Select™ monitor purchase program**. Finally, when their displays have reached the end of their lifecycle, the **Total Trade™ monitor replacement and recycling program** allows them to dispose of them in a regulatory-compliant and environmentally friendly manner. In addition, when they apply their trade-in credit to an upgrade to new NEC displays, the Custom Care lifecycle starts all over again.
